

Introduction

Hi, thankyou for reading this. This is document file for my show reels

Installation

There are 3 ways to install this project

1. package file : `RujipasVFX.unitypackage`
2. zip file : `RujipasVFX.zip`
3. GitHub : `https://github.com/Rujipas-Thongpao/Rujipas-VFX`

This project build using `Unity 6.0 (6000.0.58f2)`
After installation, you must install package `Visual Effect Graph`

The demo is in `Scenes/VFX_DemoScene` .
then, you can click play and the VFX sequence should play automatically after 2-3 seconds

Project Structure

└── VFX
```

Design

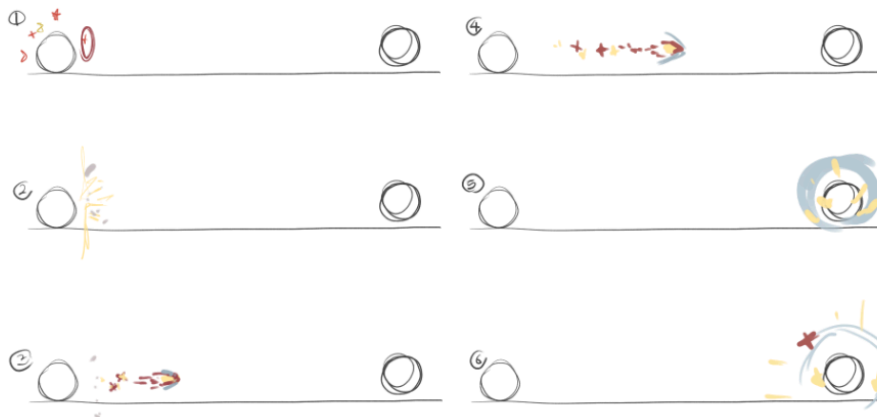

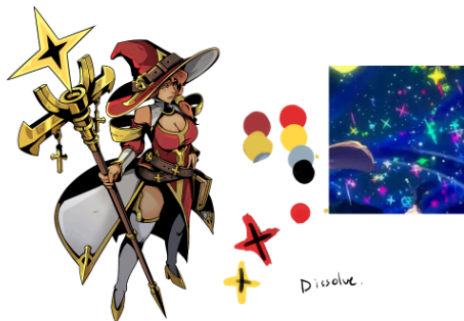

I use inspiration from character from the game `Conquest Tactics : Realm of Sin`

Element

- mage/magic
- star
- Color
- Red
- Yellow

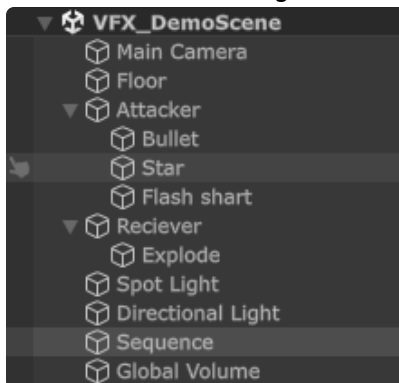

After finding inspiration and color, I design a draft sequence of the vfx.

- I choose red and yellow color for high contrast against dark environments
- with the star shapes used to emphasize mage identity
- 4 major sequence designed separately star, flash, bullet, and explode sequence.
- the star before shooting, emphasize charging and power of the bullet.
- the flash sequence, I designed to be very quick like an impact frame.
- the bullet I designed to have main color as red with yellow sub color, and blue as subtle contrast, with a star/smoke trail behind.
- the explode show how powerful the bullet actually is, with star to connect with who casting this bullet.

Implementation

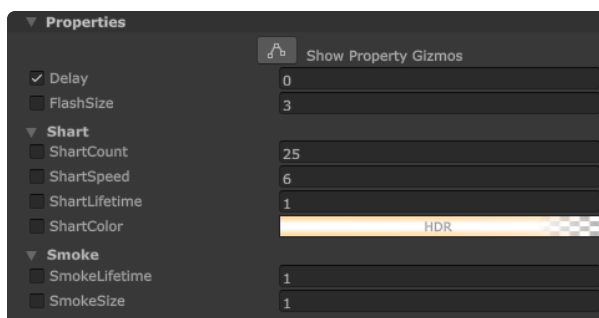

There are 4 major VFX.

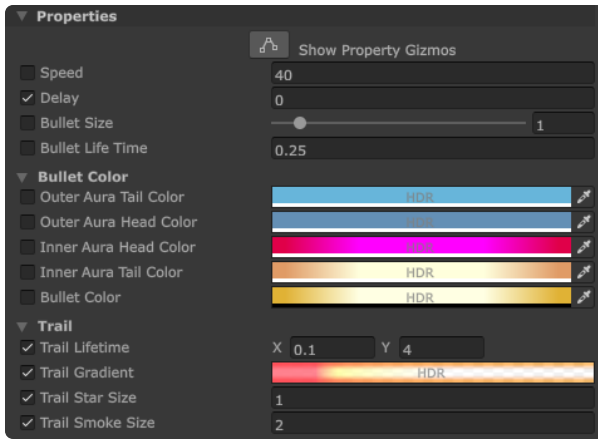

1. Star

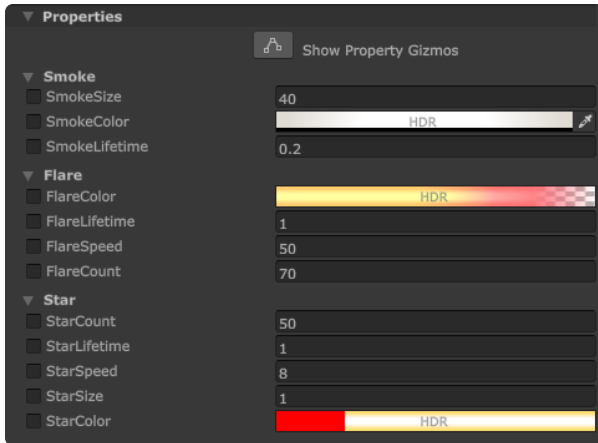

2. Flash

3. Bullet

4. Explode

every component is implemented by `VFX graph` and `shader graph`, and I expose parameter for further customization.

I combine every component into `Timeline`
